1. M-MethaneRS campaign

Scheme

June 26th - July 12th 2024

UNIVERSITÄT
HEIDELBERG
ZUKUNFT
SEIT 1386

Instituto
Nacional
de Técnica
Aeroespacial

Universidad
Carlos III de Madrid

AEMet
Agencia Estatal de Meteorología

Umwelt
Bundesamt

Pinto

Valdemingomez

1. M-MethaneRS campaign

Instrumentation I : HySpex SWIR Camera

The same camera Aircraft

Knapp (PhD Thesis, 2024)

1. M-MethaneRS campaign

Instrumentation II: Satellites (CH₄)

EnMAP
Private data
30x30m

Bundesministerium
für Wirtschaft
und Klimaschutz

GHGSat
Private data
25x25m

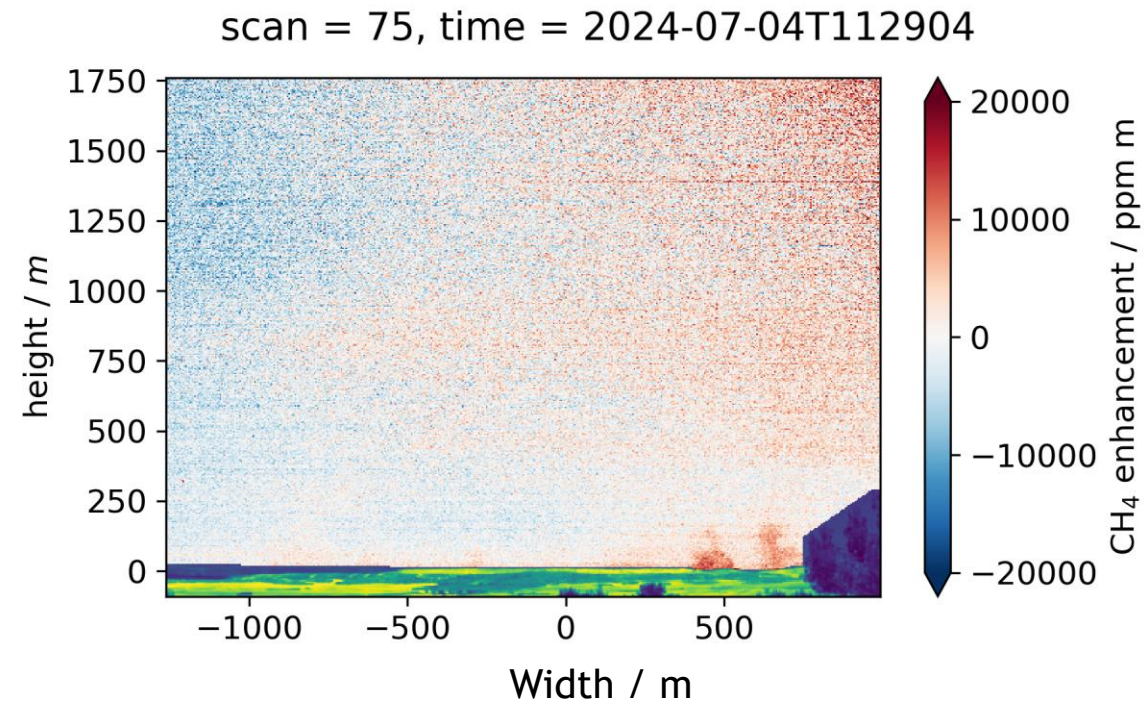

SP5-TROPOMI
Open Data
7.5x5.5km (CH₄) 5.5x5.5km (NO₂)

1. M-MethaneRS campaign

Outputs: HySpex (ground)

(Preliminary data)

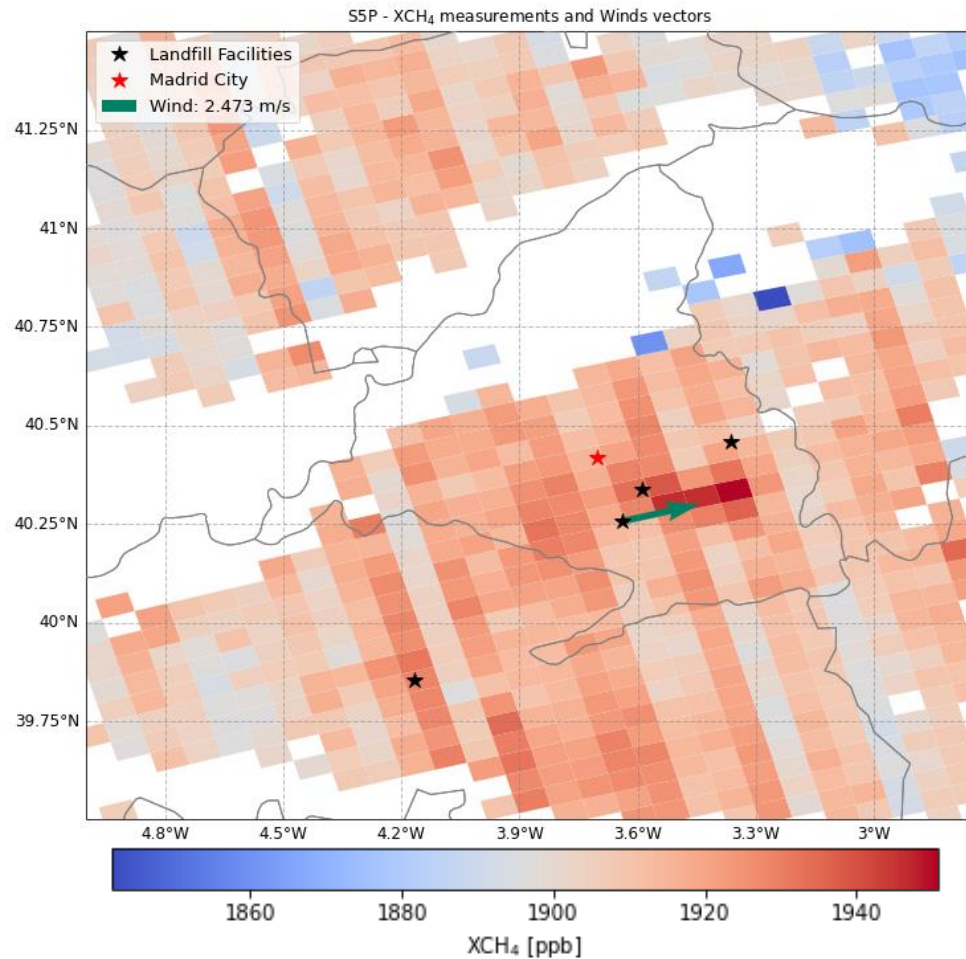

Index

- 1. M-MethaneRS Campaign
 - *HySpex Cameras (x2)*
 - *Satellites (x3)*
 - *Aircraft*
- 2. SP5-TROPOMI
 - *Integrated Mass Enhancement (IME) method*
 - Background Substration and Correction methods
 - Plume Selection

2. SP5-TROPOMI

Outputs: TROPOMI

Raw

Processed

2.1. Integrated Mass Enhancement (IME)

Formulation

$$Q = \frac{IME \cdot U_{eff}}{L}$$

$IME = \sum_i A_i \cdot ME_i$ → Background subtraction

$L = \sqrt{N \cdot A}$ → Plume selection

$U_{eff} = U_{PBL}$ → Wind selection

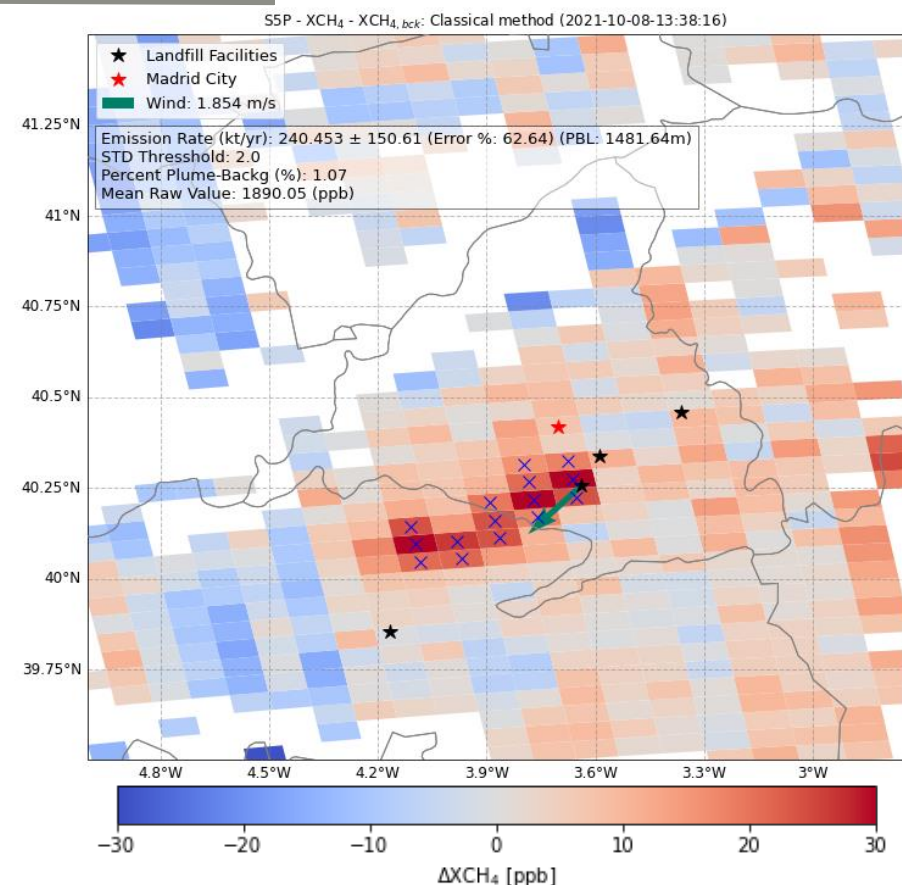

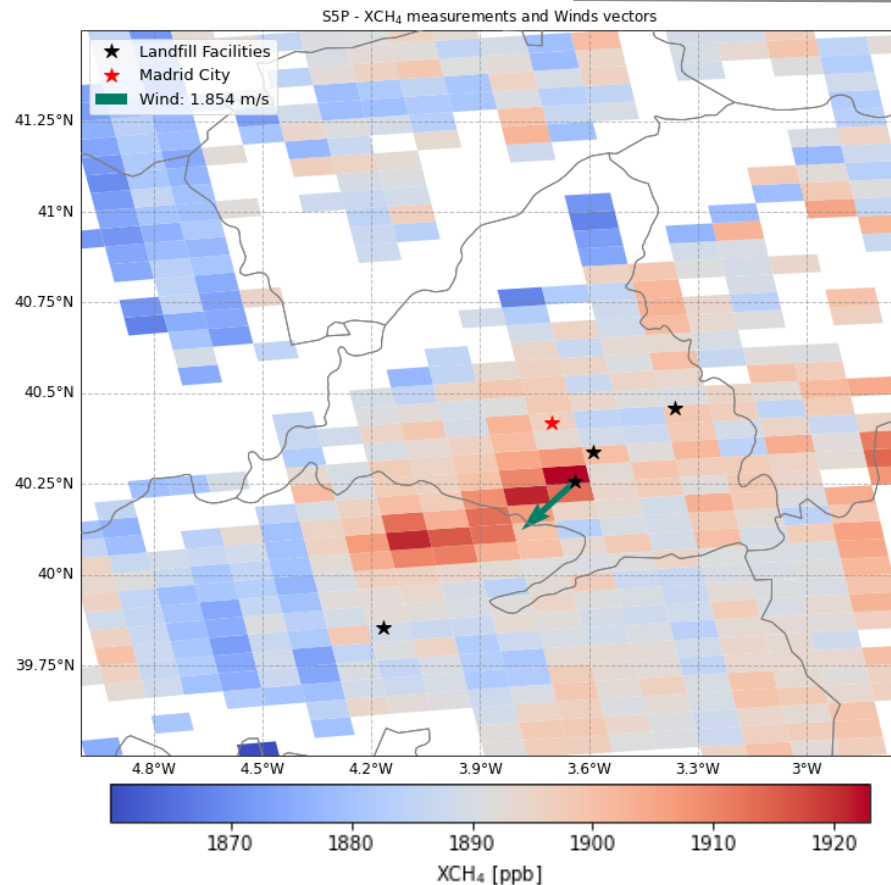

2.1. Integrated Mass Enhancement (IME)

Background Substration: Classical method

Mean value for the whole image is subtracted

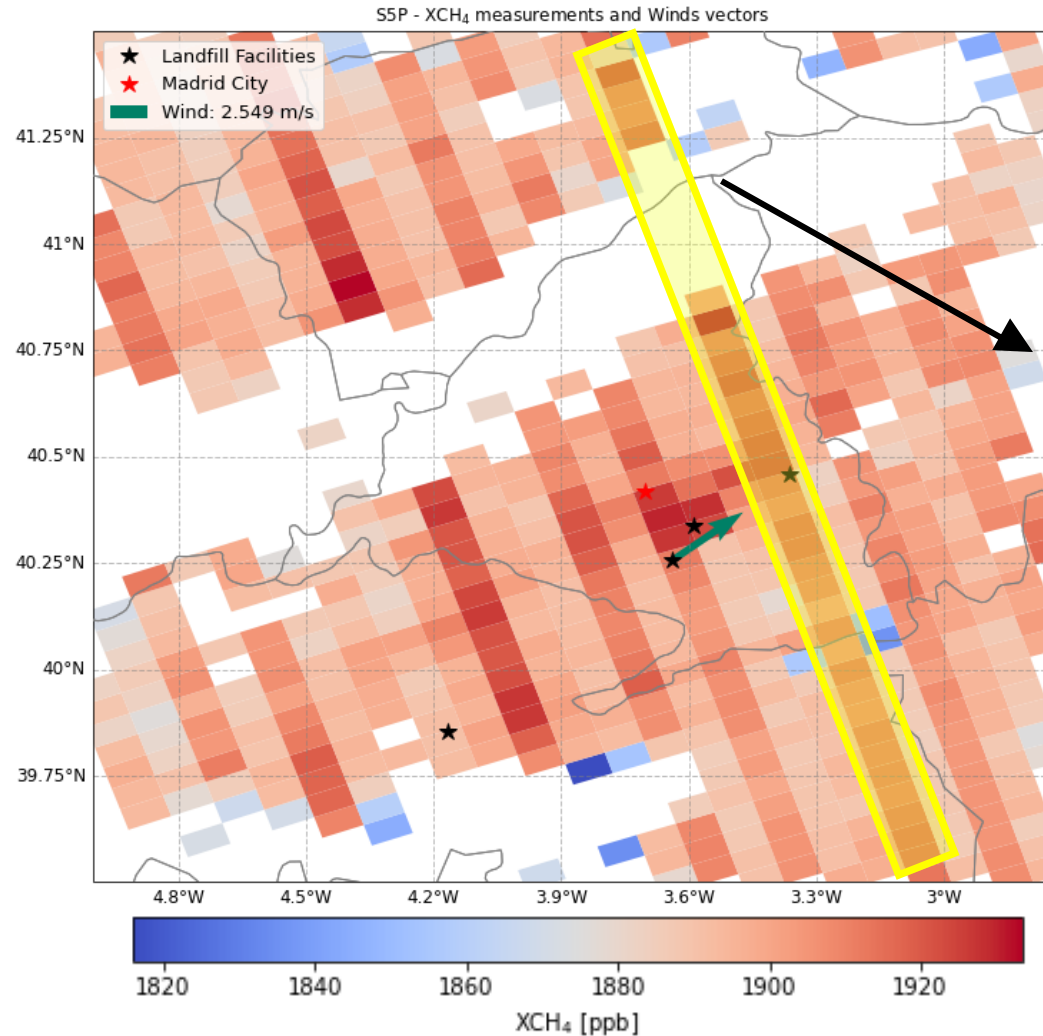

Find plume pixels via threshold

Mean value is calculated again without plume pixels

2.1. Integrated Mass Enhancement (IME)

Background Substration: Destriping method I

Mean value for
each column is
subtracted

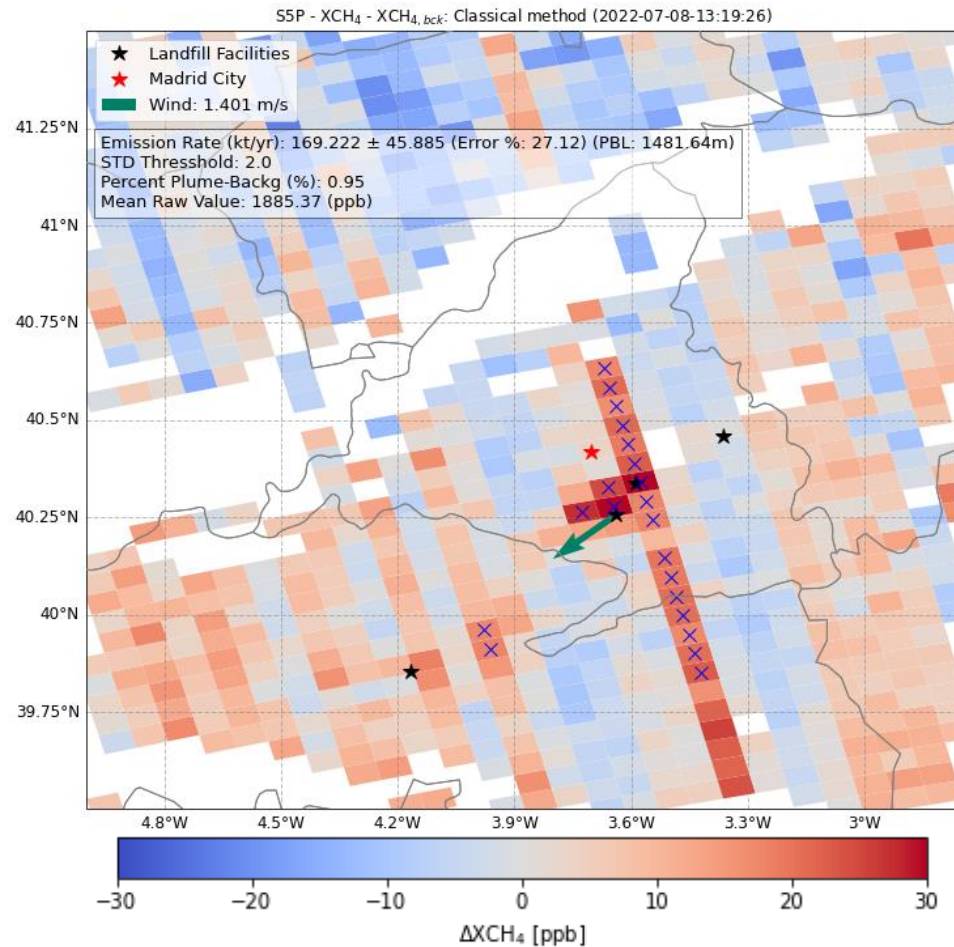

Find plume
pixels via
threshold

Mean value is
calculated
again without
plume pixels

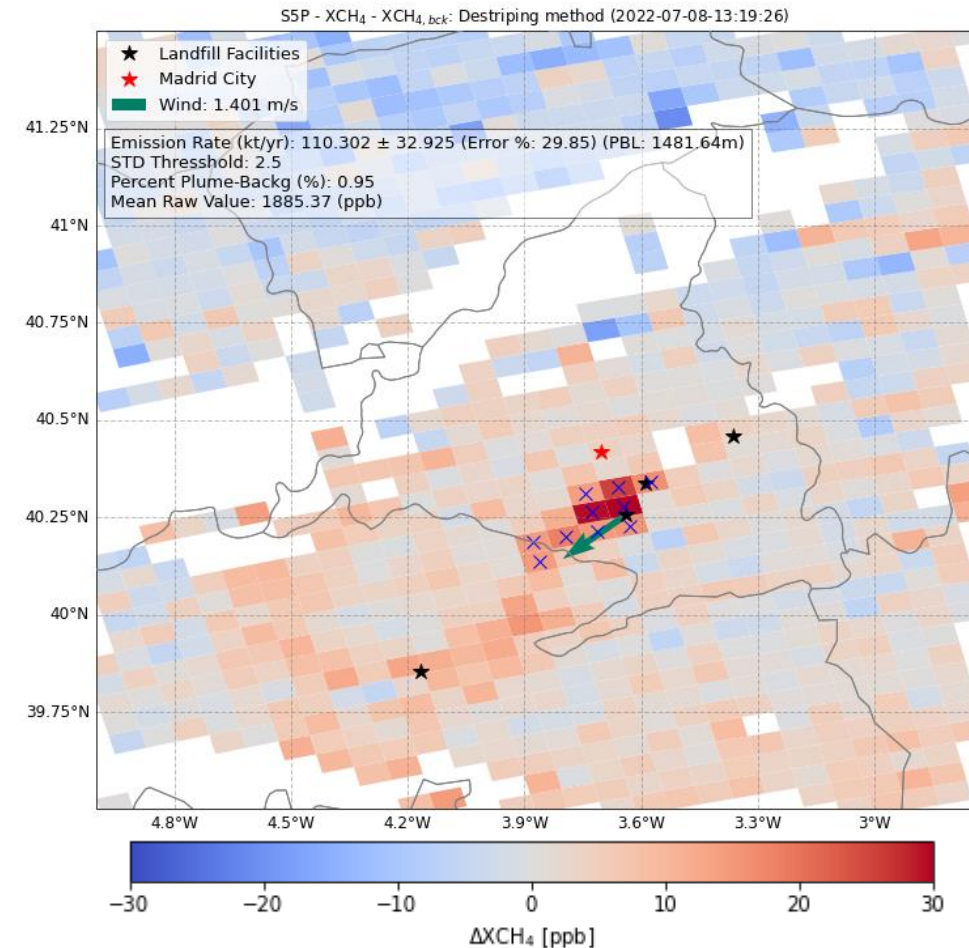

2.1. Integrated Mass Enhancement (IME)

Background Substration: Destriping method II

Classical method

Destriping method

2.1. Integrated Mass Enhancement (IME)

Formulation

$$Q = \frac{IME \cdot U_{eff}}{L}$$

$IME = \sum_i A_i \cdot ME_i \longrightarrow$ Background subtraction

$L = \sqrt{N \cdot A} \longrightarrow$ Plume selection

$U_{eff} = U_{PBL} \longrightarrow$ Wind selection

2.1. Integrated Mass Enhancement (IME)

Plume selection

$$T = \overline{XCH_4} + N \cdot \sigma_{XCH_4}$$

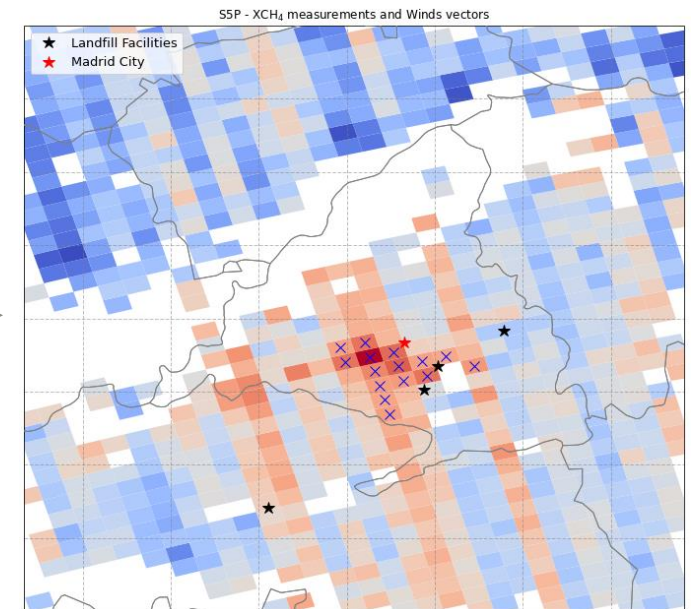

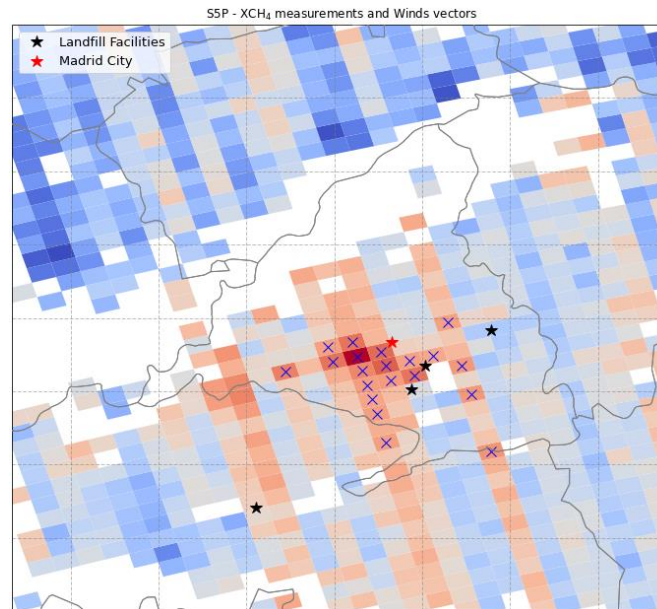

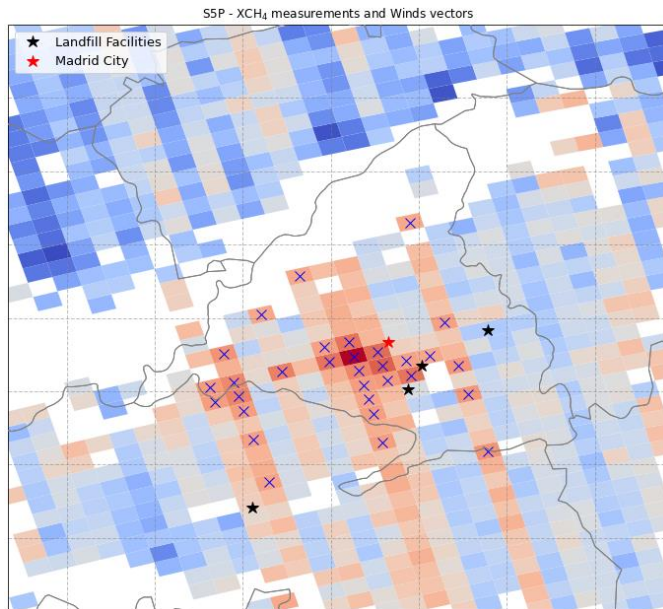

Mean value for
whole image is
calculated

Find pixels
which are
above N times
STD

Mean value is
calculated
again without
plume pixels

Pixels must be
surrounding
the landfill

Pixels must be
in contact

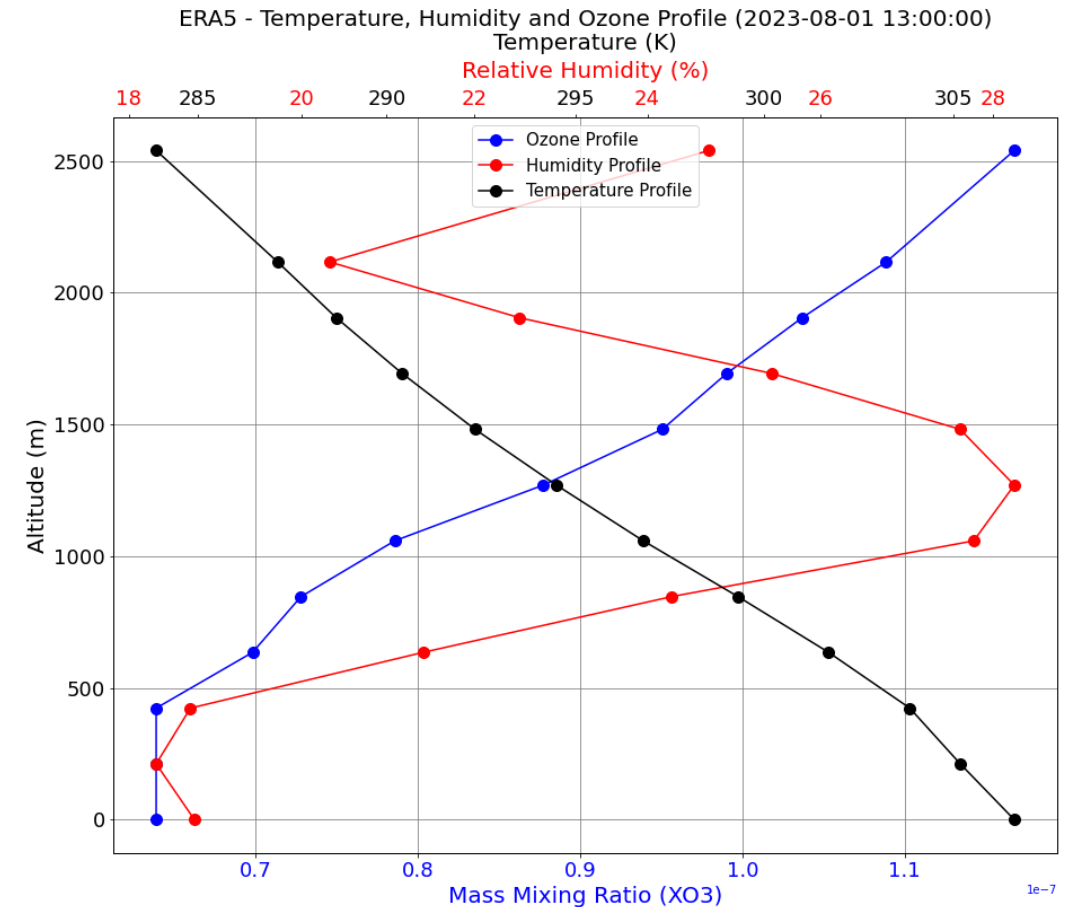

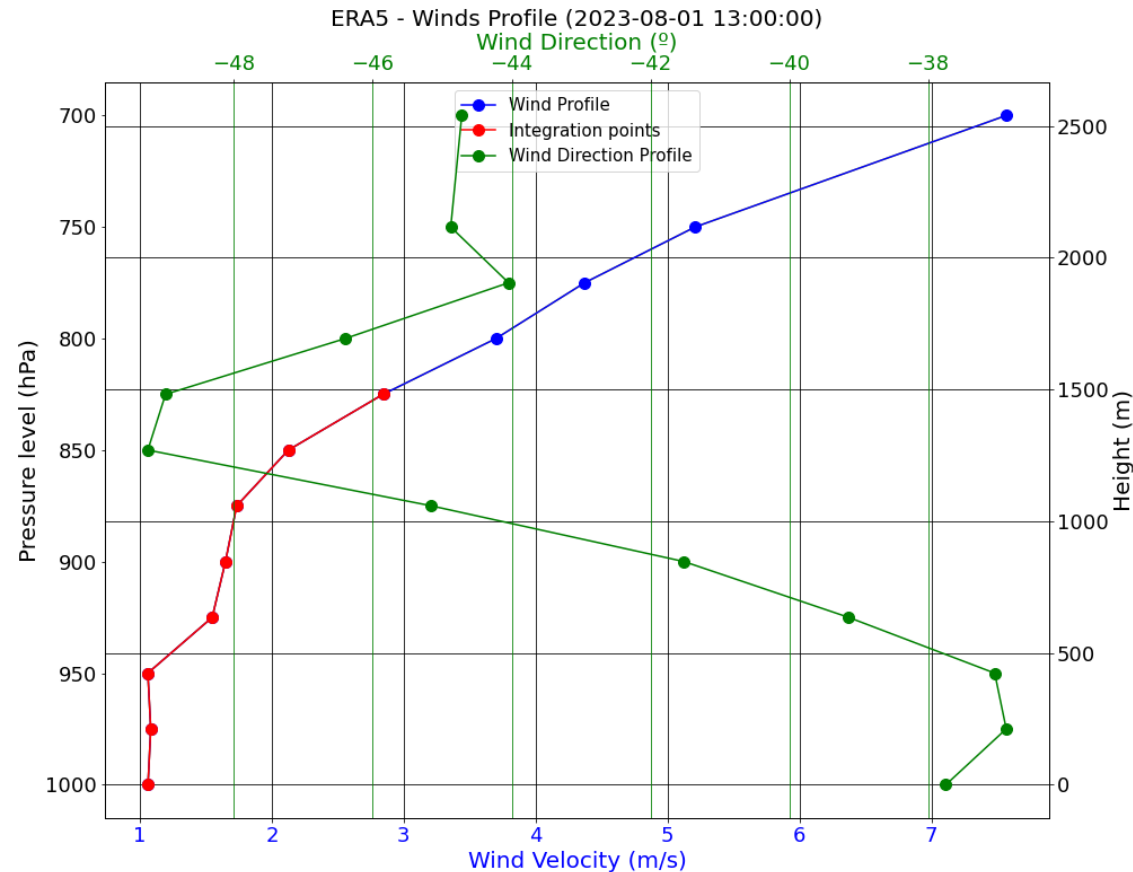

2.1. Integrated Mass Enhancement (IME)

Formulation

$$Q = \frac{IME \cdot U_{eff}}{L} \left\{ \begin{array}{ll} IME = \sum_i A_i \cdot ME_i & \longrightarrow \text{Background subtraction} \\ L = \sqrt{N \cdot A} & \longrightarrow \text{Plume selection} \\ U_{eff} = U_{PBL} & \longrightarrow \text{Wind selection} \end{array} \right.$$

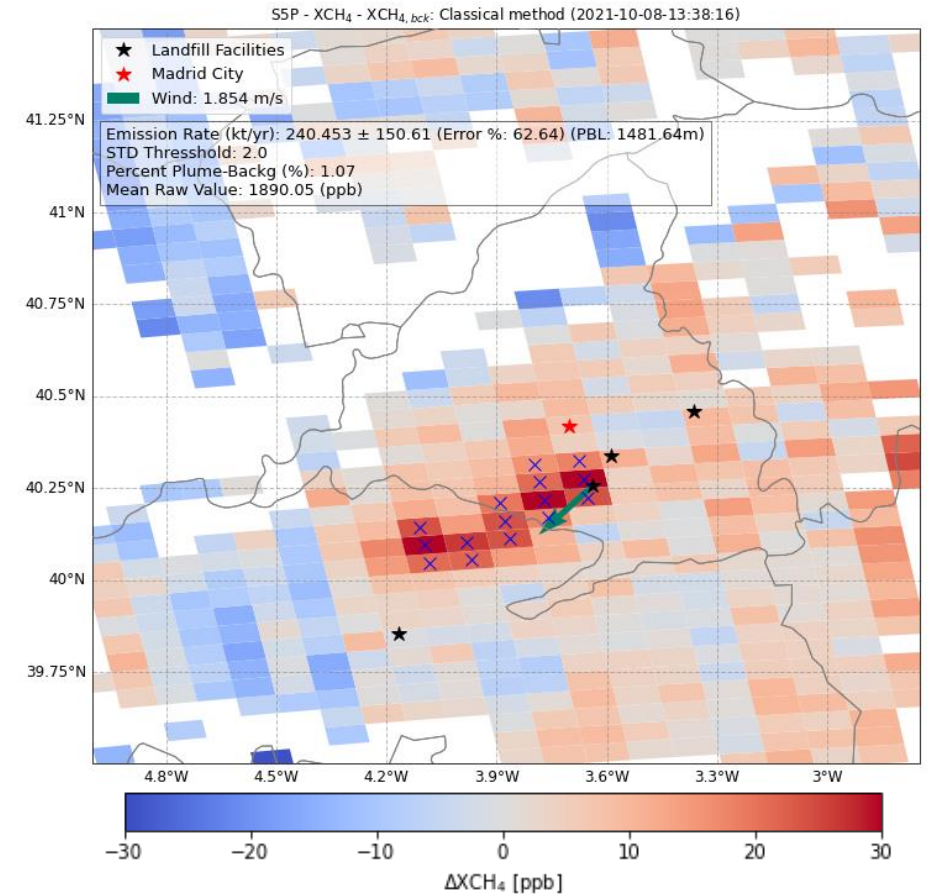

2.1. Integrated Mass Enhancement (IME)

Wind selection: Planetary Boundary Layer (PBL)

2.2. Comparision Heidelberg Team

Example days

4. ANSER-AT links

Proof the method

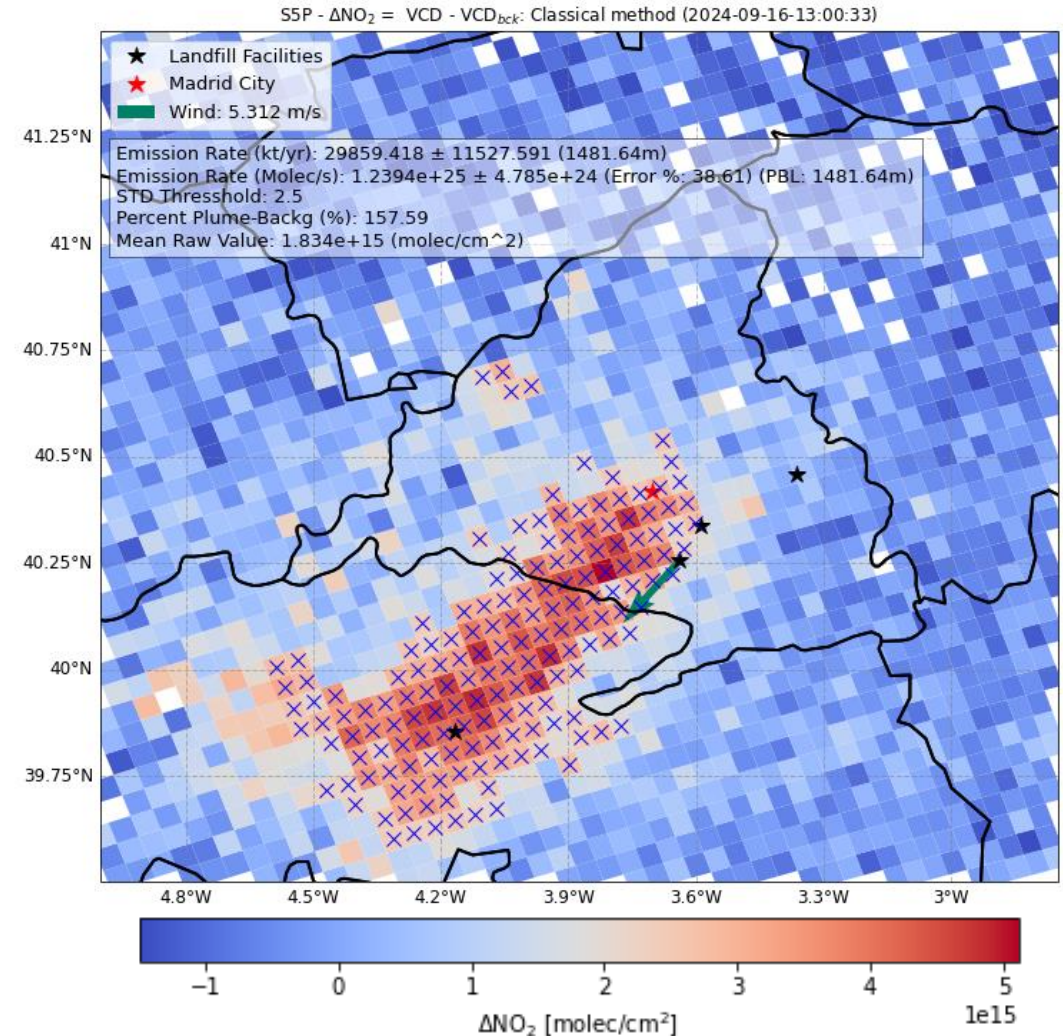

- Emission Rate Estimation:
 - PBL selection
 - Plume selection
 - Integrated Mass Enhancement (IME)
 - The method works for other gases: Santaren (AMTD, 2024)
 - Long-lived gases → CH_4 , CO_2
 - Short-lived gases → NO_2
- Use TROPOMI to seek plumes

4.1. Verification of the method for NO₂ Overpasses

Raw

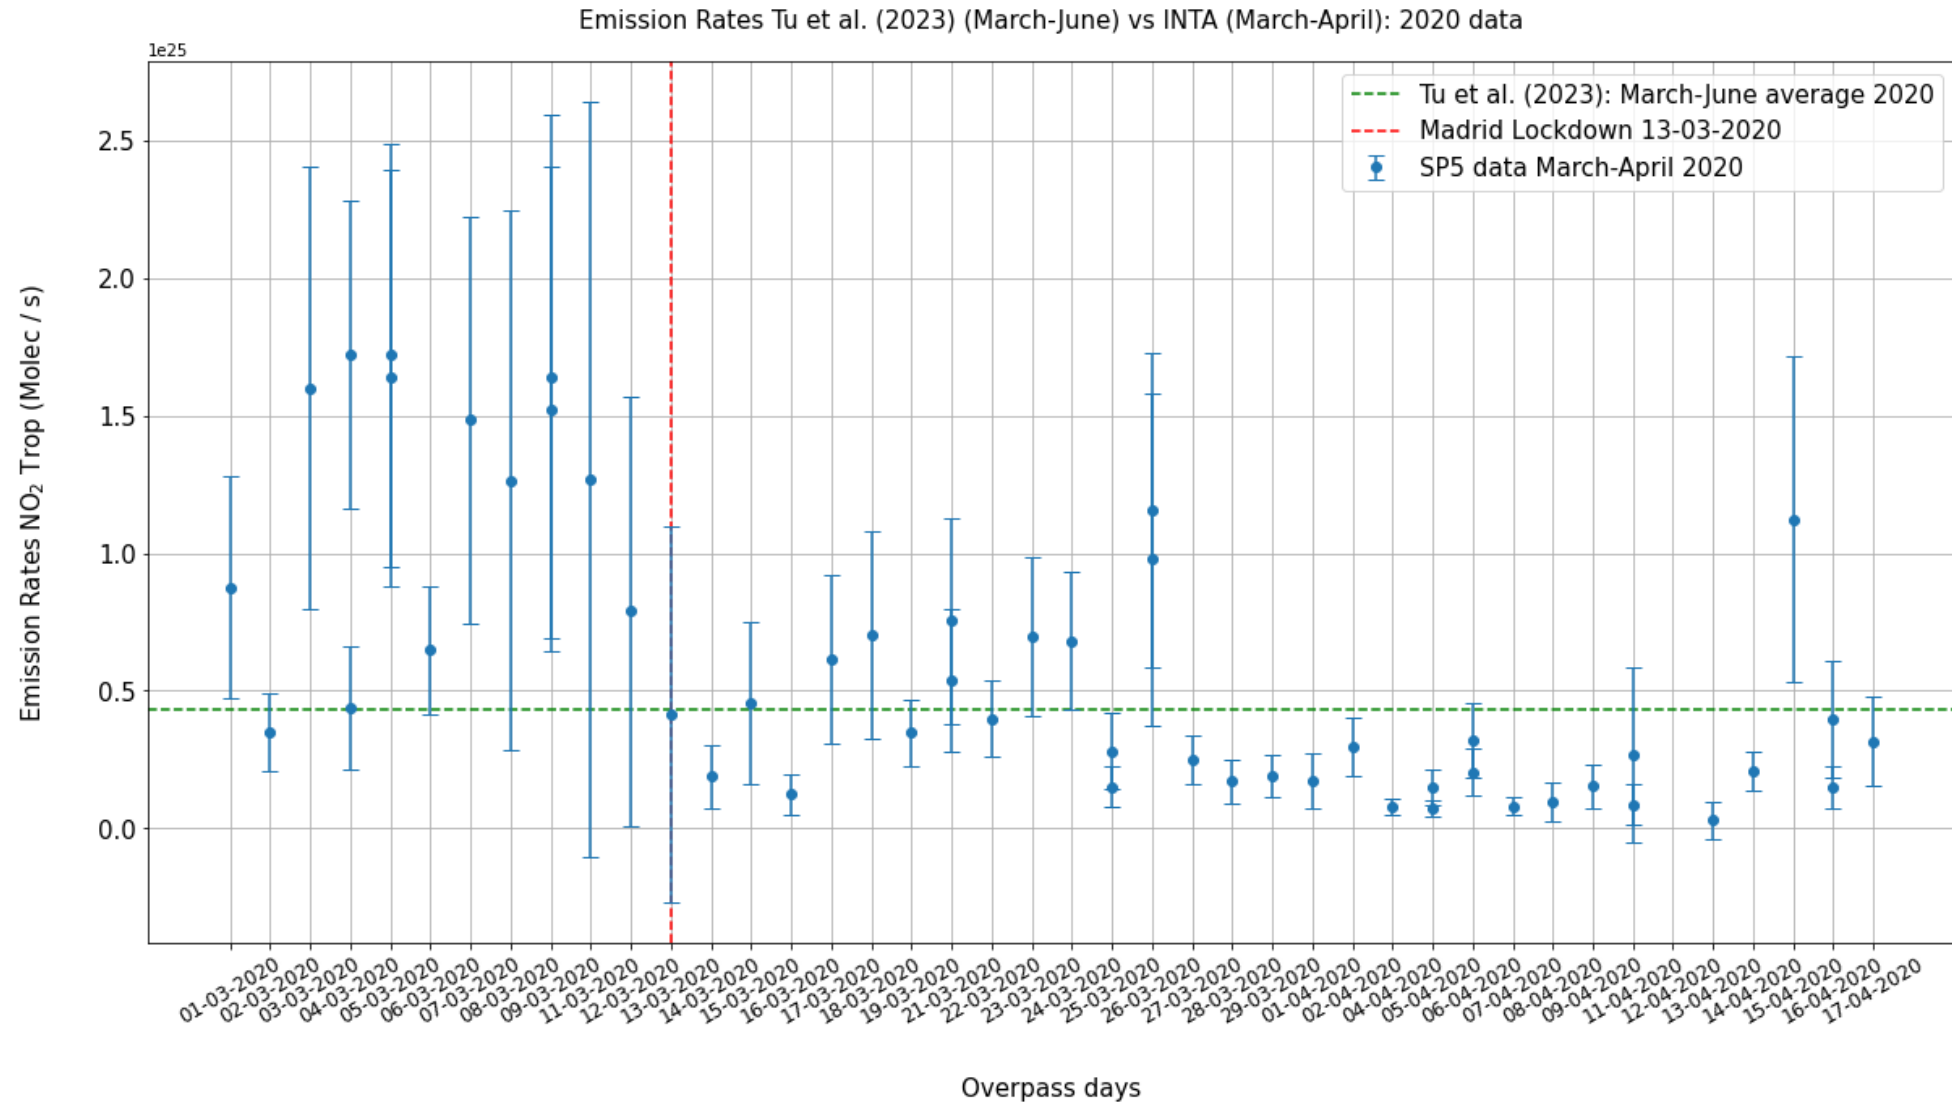

Processed

4.1. Verification of the method for NO₂

Emission Rates: Effects of Madrid Lockdown

4.1. Verification of the method for NO₂

Seasonality (anthropogenic)

Index

5. Ongoing work

- ERA5
 - Latitude-longitude grid resolution $0.25 \times 0.25^\circ$
 - Altitude resolution 37 pressure levels
- HARMONIE-AROME Model (AEMET) (Bengtsson et al. 2017)
 - More spatial ($2.5 \times 2.5 \text{ km}$) and altitude resolution (17 levels)
 - PBL altitude as output
